

THE RACM PROCESS

PRESENTED TO

NDIA Program Management Systems Committee

January, 2004

BACKGROUND

FBM NEVER HAD AN OVERRUN IN 30+ YEAR HISTORY

- BUT COSTS AND SCHEDULES ON FBM AND OTHER PROGRAMS HAD BECOME EXCESSIVE.
- THEREFORE: A THREE YEAR STUDY BY LOCKHEED WAS INITIATED IN THE 1990s.

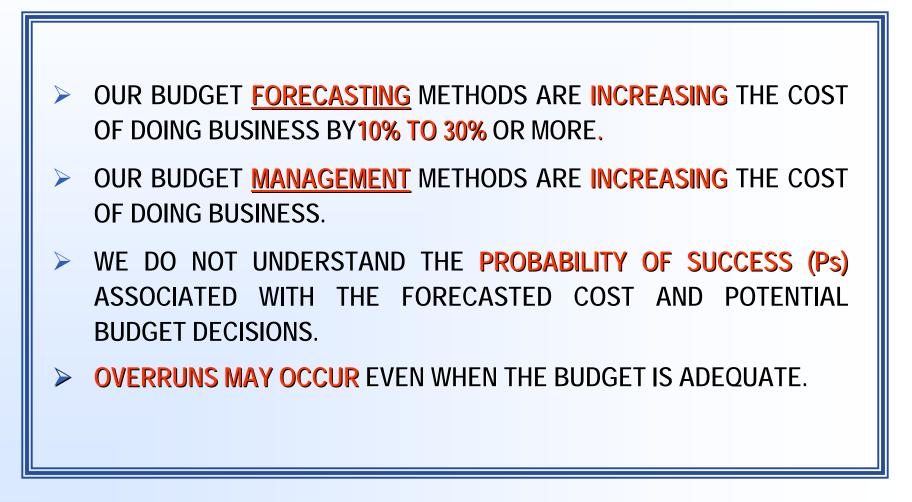

STUDY QUESTIONS

- > WHAT IS THE **EXPECTED** COST?
- WHAT IS THE PROBABILITY OF MEETING THE COST GOALS?
- HOW CAN WE BEST MANAGE THE BUDGET TO MEET THE COST GOALS?
- > HOW CAN WE MAKE THIS VISIBLE TO MANAGEMENT?

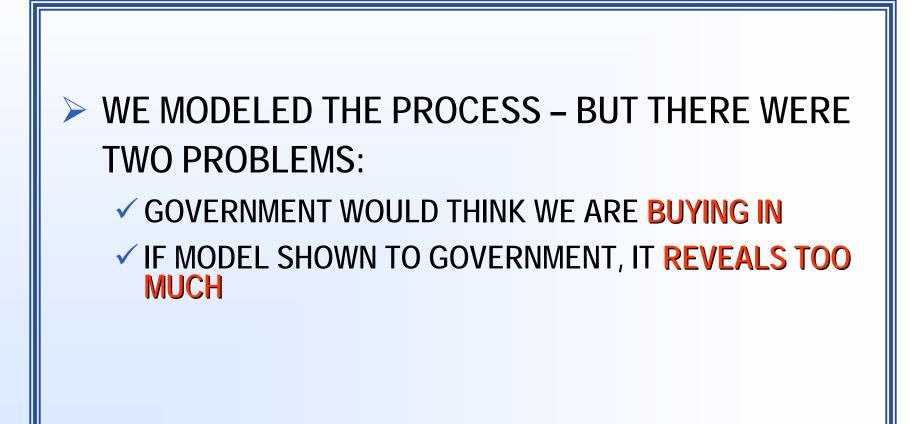

GENERAL CONCLUSION

SOLUTION – THE RACM PROCESS

WHAT DO WE DO WITH THIS?

- WENT TO OSD ACQUISITION PERFORMANCE ANALYSIS (WAYNE ABBA AND GARY CHRISTLE)
 - THEN TO: COST ANALYSIS IMPROVEMENT GROUP (CAIG) Dr. David McNicol; ACQUISITION REFORM; ECONOMIC SECURITY; and RESEARCH AND ENGINEERING
 - THEN TO: <u>BMDO</u> PROGRAM OFFICE (twice), <u>ARPA</u> DIRECTORATE; <u>USAF</u>: COST ANALYSIS; AERONAUTICAL SYSTEMS CENTER; AFSC (ESD); <u>US NAVY</u>: COST ANALYSIS; NAVAIR ASW; FBM; and <u>US ARMY</u> - COST ANALYSIS.

WENT TO ACADEMIA

- ✓ NORTHWESTERN
- PENN STATE
- SANTA CLARA UNIVERSITY
- MIT

WENT TO SOCIETIES

- ✓ <u>SCEA</u> SOCIETY OF COST ESTIMATING AND ANALYSIS
- ISPA
- ✓ <u>PMA & NSIA</u> 6TH ANNUAL INTERNATIONAL CONFERENCE
- FINALLY! GARY CHRISTLE AND WAYNE ABBA FUNDED IDA INSTITUTE FOR DEFENSE ANALYSES – Dr. Matt Goldberg. Dr. Chuck Weber.

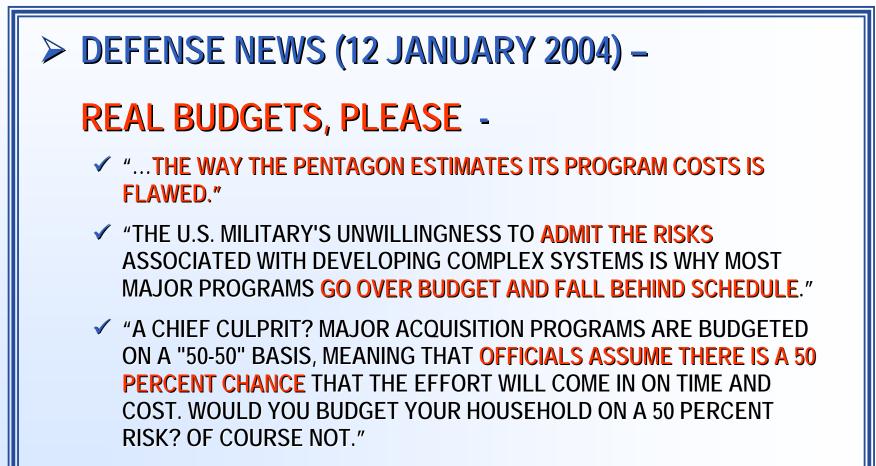

FINDINGS

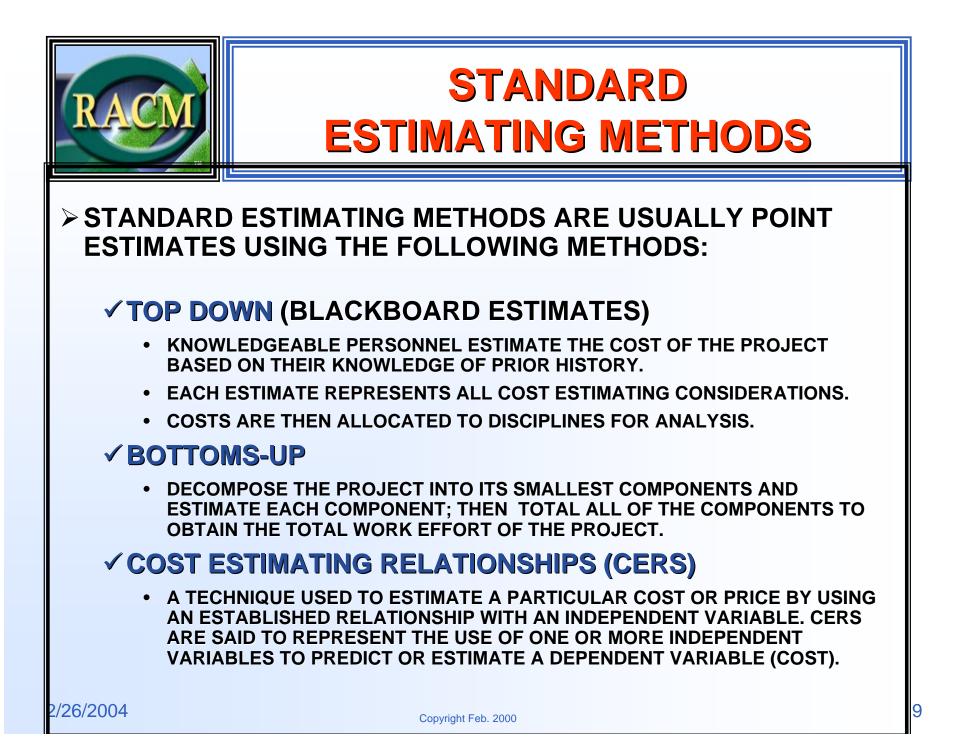

INSTITUTE FOR DEFENSE ANALYSES (IDA) "THE APPROACH TO COST ESTIMATION AND COST MANAGEMENT IS A NEW, UNIQUE APPROACH TO PROGRAM MANAGEMENT AND PERFORMANCE MANAGEMENT"

- RACM "CAN CHANGE AND IMPROVE THE FINAL COST OUTCOME OF THE PROGRAM; I.e. REALIZE SIGNIFICANT COST SAVINGS"
- RACM is "UNIQUE IN CONTAINING A MODULE FOR MANAGING RISK RESERVES"
- ✓ "DOD WOULD BE WELL ADVISED TO DEMAND RISK ESTIMATES"
- "THE RACM DEVELOPERS DREW AN IMPORTANT DISTINCTION BETWEEN 'ARITHMETIC SUMMING' AND 'STATISTICAL SUMMING'"

CONFIRMATION of FINDINGS (cont.)

POINT ESTIMATES SHOULD CONSIDER

- HISTORICAL COSTS FOR EACH ELEMENT, EITHER ACTUAL OR INTUITIVE (BASELINE DATA)
- > POTENTIAL SCHEDULE IMPACTS ON EACH COST ELEMENT.
- POTENTIAL IMPROVEMENTS ANTICIPATED FOR EACH COST ELEMENT
- > PROGRAM LEVEL SCHEDULE IMPACTS
- > THE EFFECTS OF UNFORESEEN PROBLEMS ON THE PROGRAM.
- MANAGEMENT POLICY (DISTRIBUTION OF BUDGET AND MANAGEMENT OF RESERVES)
- > MANAGEMENT'S TARGET Ps

CAN ALL OF THIS BE CONSIDERED IN ONE NUMBER?

CONCERNS

- > THESE METHODS DO <u>NOT</u>:
 - ✓ INDEPENDENTLY CONSIDER ALL OF THE "COST ESTIMATING FACTORS" (CEF)
 - ✓ IDENTIFY THE MOST EFFECTIVE **<u>DISTRIBUTION OF THE BUDGET.</u>**
 - ✓ IDENTIFY THE <u>RESERVES</u> WHICH SHOULD BE MAINTAINED IN ORDER TO MEET THE THE PROGRAM'S Ps.
 - ✓ PROVIDE MANAGEMENT VISIBILITY INTO ASSUMPTIONS
 - ✓ DETERMINE THE RISK (PS) OF COMPLETING THE PROGRAM WITHIN BUDGET.
 - ✓ PROVIDE **EQUAL** Ps FOR ALL ACCOUNT MANAGERS.
- IF ARITHMETIC SUMMING IS USED, IT WILL PROBABLY INCREASE COSTS DRAMATICALLY.
- IN COMPETITIVE MODE, RISK CAN BE INCREASED AND POTENTIALLY CAUSE A <u>PROGRAM FAILURE</u>

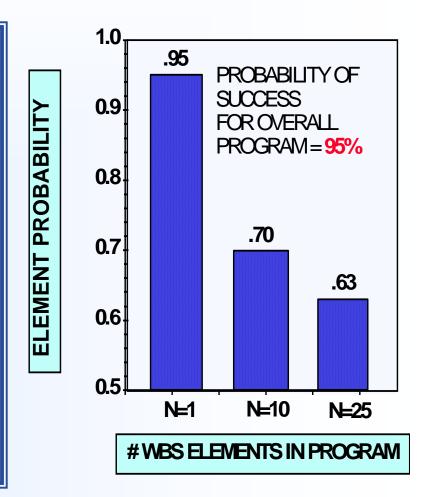

FIRST CONCERN INDEPENDENT CONSIDERATION

- IT IS NOT POSSIBLE TO CONCURRENTLY AND INDEPENDENTLY CONSIDER ALL OF THE "COST ESTIMATING FACTORS" (CEF) PREVIOUSLY MENTIONED AND REPEATED BELOW:
 - ✓ IMPROVEMENTS ANTICIPATED FOR EACH COST ELEMENT
 - ✓ SCHEDULE IMPACTS ON EACH COST ELEMENT.
 - ✓ PROGRAM LEVEL SCHEDULE IMPACTS.
 - ✓ PROGRAM LEVEL COST IMPACTS.
 - ✓ EFFECTS OF BUDGET DISTRIBUTION AND MANAGEMENT RESERVE.
 - ✓ EQUAL Ps FOR ALL ACCOUNT MANAGERS.

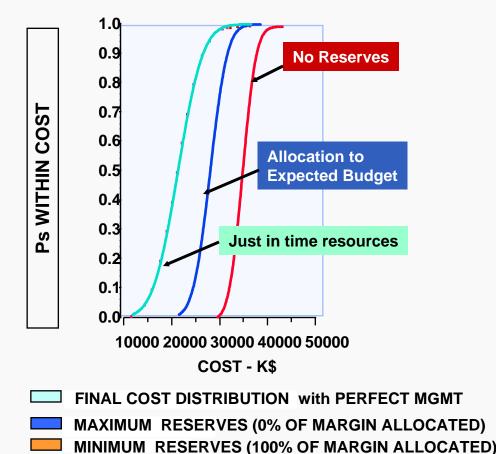

SECOND CONCERN DISTRIBUTION OF THE BUDGET

- RESOURCES DISTRIBUTED SHOULD BE NO GREATER THAN WHAT IS STATISTICALLY CONSISTENT WITH THE NUMBER AND MAGNITUDE OF THE ELEMENTS IN THE WBS.
- > THE GREATER THE NUMBER OF ELEMENTS INVOLVED IN THE BUDGET ALLOCATION, THE LOWER THE PS NEEDS TO BE FOR EACH ELEMENT TO ACHIEVE THE DESIRED OVERALL PROBABILITY FOR THE PROGRAM.

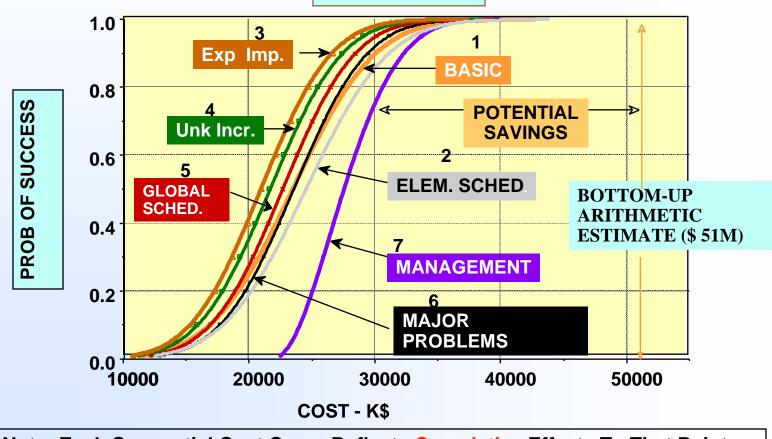

THIRD CONCERN ADEQUATE MANAGEMENT RESERVE

MUST CONSIDER:

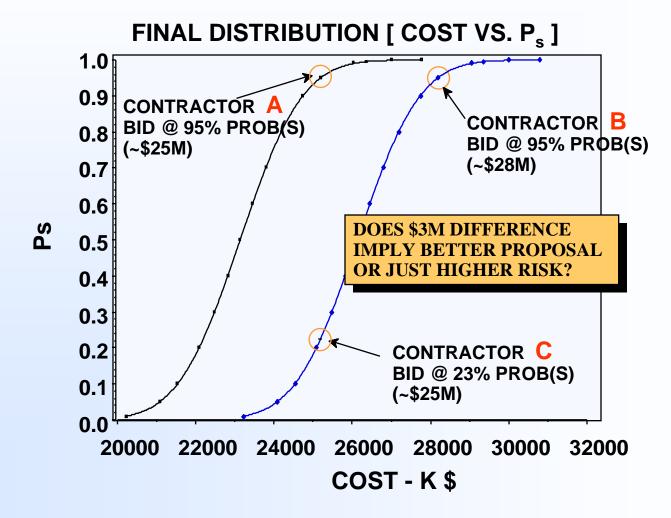

- PROGRAM STRUCTURE
- UNCERTAINTY IN THE ESTIMATE.
- COST WHICH IS NOT WBS ELEMENT IDENTIFIABLE.
- TRANSFER OF FUNDS BETWEEN ACCOUNTS.
- MAXIMIZING "PROFIT".

Note: Each Sequential Cost Curve Reflects Cumulative Effects To That Point.

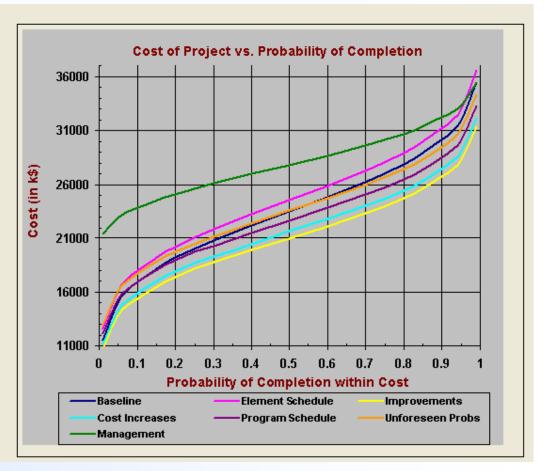

FIFTH CONCERN

KNOWING THE PROBABILITY OF SUCCESSFULLY COMPLETING THE PROGRAM

Apoll	o Rocket Pro	oject (Demo)	
Probability	Unforeseen Problems	Management	Impact
0.01	12874	21429	8555.8
0.05	16010	22917	6907.7
0.1	17682	23856	6174.2
0.2	19706	25114	5407.8
0.3	21166	26092	4926.5
0.4	22413	26967	4553.7
0.5	23579	27810	4230.5
0.6	24745	28670	3924.7
0.7	25993	29601	3609.0
0.8	27452	30695	3242.8
0.9	29477	32193	2715.9
0.95	31149	33390	2241.0
0.99	34285	35473	1188.2

SIXTH CONCERN

EQUAL Ps FOR EACH ACCOUNT MANAGER

ALLOCATION: WHO GETS WHAT?

- EQUALITY OF RISK FOR EACH ACCOUNT
- **IDA**: THIS METHOD:
 - OPTIMIZES COST/RISK
 - MINIMIZES MAIMS
- EVM STYLE TRACKING FACILITATED

NOTE: THIS IS A **SUGGESTED** ALLOCATION. HOWEVER, A DIFFERENT ALLOCATION WOULD PROBABLY **ADVERSELY** AFFECT THE Ps OF THE PROGRAM.

Suggested Initial	Allocation	for 90%	Proba	bility of S	luccess		-

2/26/2004

estimate at 95% Ps), then the arithmetic sum is 1000 units and the Ps is 99.999%

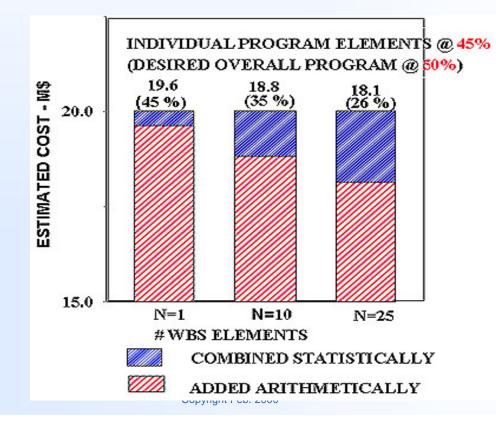

But not all need that much budget. Statistically they only need a total of 673 units at 90% Ps. Each element would require 55 units at 50% Ps with a reserve of 128 units.

What can make the arithmetic sum become true or even exceed budget? Money allocated is money spent – especially labor (once hired difficult to fire) and non-labor (once contracted...).

EIGHTH CONCERN ARITHMETIC SUMMING CAN RESULT IN Ps <50% (Program Failure)

IF INDIVIDUAL ESTIMATES ARE VERY NEAR THE 50% Ps/EXPECTED VALUES, E.G. 45% Ps, THE RESULT IS A PROGRAM WITH LITTLE CHANCE OF SUCCESS.

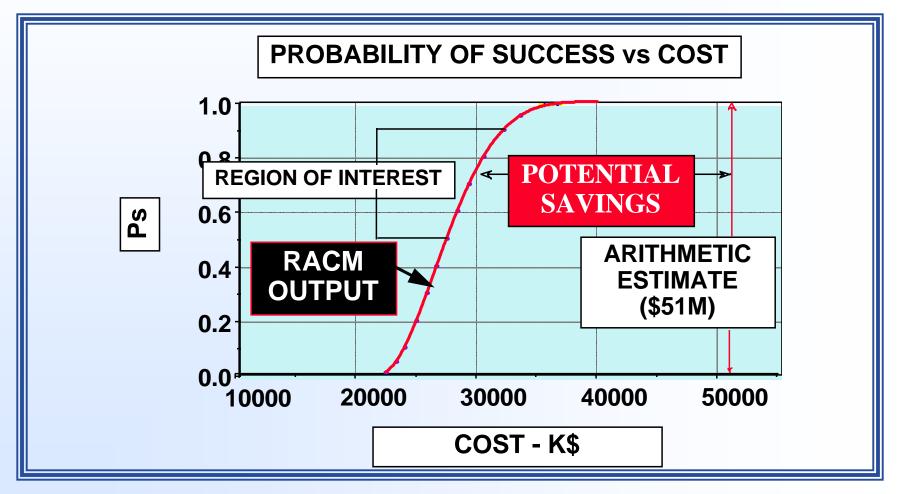

RECOMMENDATION (RACM PROCESS)

- SEPARATELY CONSIDERS COST ESTIMATING FACTORS (CEF) FOR EACH ELEMENT.
- PROVIDE PROGRAM MANAGEMENT A METHOD OF DETERMINING EFFICIENT BUDGET ALLOCATION.
- IDENTIFY A MANAGEMENT RESERVE THAT PROVIDES THE BEST POSSIBILITY OF MEETING THE PROGRAM'S COST GOALS.
- PROVIDE MANAGEMENT VISIBILITY OF MAJOR ASSUMPTIONS AFFECTING THE PROGRAM'S PS.
- > COMPUTE THE PROGRAM'S **PROBABILITY OF SUCCESS (Ps)**.
- > ALLOW **RIGOROUS TESTING** OF MAJOR ASSUMPTIONS.
- PROVIDE INPUTS INTO THE EVM PROCESS AND <u>REDISTRIBUTE THE</u> <u>BUDGET</u> WHEN NECESSARY TO MAXIMIZE Ps

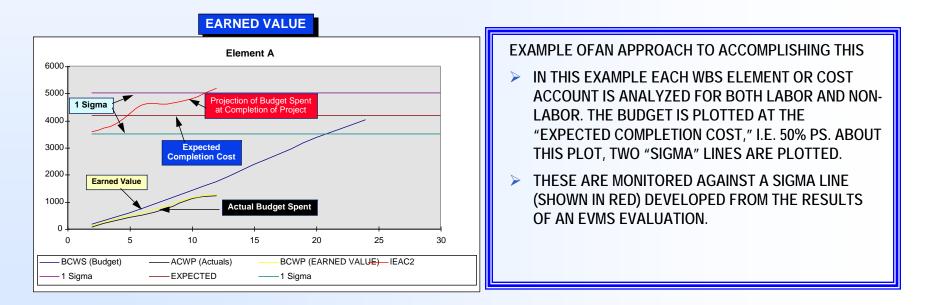

RESULT OF IMPLEMENTING RECOMMENDATIONS - SAVINGS

EARNED VALUE CONSIDERATIONS

- > THE EVMS SYSTEM CAN BE USED TO UPDATE RACM AS A REFINEMENT OF EACS.
- IF THE RACM PROCESS, IN CONSONANCE WITH EARNED VALUE PROCESS, IS APPLIED THROUGHOUT THE LIFE OF THE PROGRAM, CORRECTIONS CAN BE MAXIMIZED THROUGH REDISTRIBUTION OF THE BUDGET IN ACCORDANCE WITH PS REQUIREMENTS.

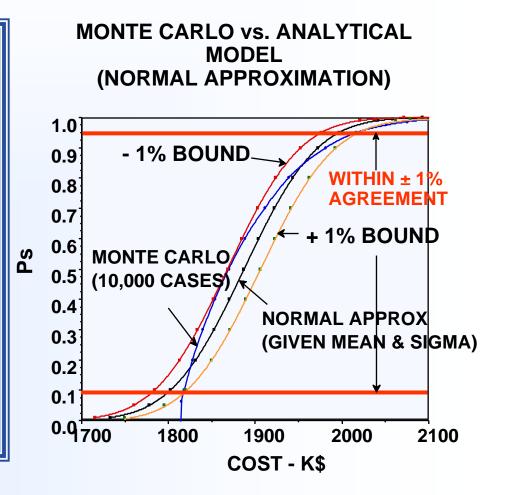

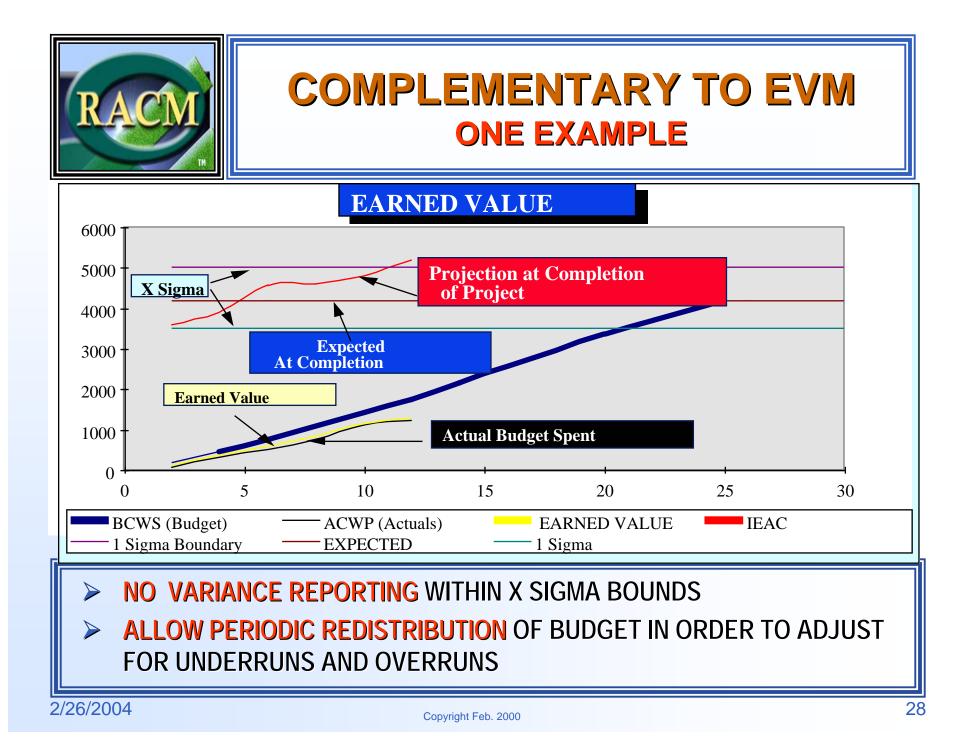

PREVIEW OF <u>RACM</u> PROCESS

RIGOROUS TESTING OF MAJOR ASSUMPTIONS

- RACM PROCESS USES AN ANALYTICAL APPROACH (INSTANT RESPONSE)
- > MONTE CARLO TECHNIQUES
 - MAY INHIBIT A THOROUGH ANALYSIS AND A "WHAT-IF" CAPABILITY (SLOWER RESPONSE TO EACH QUERY)
 - MAY INTRODUCE A RANDOM SAMPLING ERROR

RACM Cost Estimating Steps (This program works best with a screen resolution of 1024 x 768 and small fonts)

EXPLANATION

For the illustration, assume that we start with 25 independent, identical, normal distributions of mean = 0 & sigma =1. There is no need to refer to some random set without these parameters & then standardize/Z score transform them all into that form. It's only an example & it's easiest just to start with the simple N(0,1) distributions because of the math (numbers) involved. The values are automatically expressed in sigma units just like Z score transformed variables so that we can reference the tables directly. Being identical certainly isn't the typical situation, but it suffices for illustration of the principle (& it is the worst case scenario so it produces a nice drastic impact on the results). In the real world (& the model), where the sigma's are all different, a more complicated solution exists to achieve the equi-risk allocation values - can't simply divide by the number of elements. But the same principle exists - simple arithmetic summation of xx% confidence points do not produce an xx% confidence point for the sum of all the variables. They over estimate just like the pitch example demonstrates
