January 2016

Operation Blended Warrior a success; plans underway for 2016

With the wildly successful first year of Operation Blended Warrior completed, plans are already underway for the 2016 OBW at Interservice/Industry Training, Simulation and Education Conference (I/ITSEC).

Kent Gritton, Joint Training and Integration Evaluation Center director and co-deputy for OBW2016, provided some quick insight into OBW's accomplishments in 2015 and the outlook for 2016. Gritton said they are still assessing lessons learned and results, and, when completed, more detailed information will be included in various reports and the I/ITSEC paper.

Submitted by AFAMS

The Simulation Interoperability and Standards Organization (SISO) Acquisition Modeling and Simulation Standards Profile Product Development Group (PDG) has developed “A Standards Profile for the Use of Modeling and Simulation in Support of Acquisition Activities.”

To seek greater practitioner feedback and ensure the products represent the consensus view of the community, SISO and the PDG have employed a “trial use” approach to open the products for constructive comment by the broader practitioner community. This approach allows the draft products to benefit from

allowing users to implement them, gain experience and evaluate them. Valuable user insights and participation will improve these draft products.

The documents are open for comments and suggested additions/deletions/updates through mid-summer 2016. To access the documents and provide feedback [visit the SISO PDG website](#).

To examine the practicality and viability for the standards profile, the PDG also seeks input from sources that represent application vignettes or use cases of standards and technical activities. For more information on participation or contributions to the application vignettes, [email the SISO PDG Chair, Kenneth “Crash” Konwin](#), or call him at 703-984-1099.

ACQUISITION MS STDS PROFILE PDG

PDG approved with EXCOM approval of their Product Nomination (PN) 6 March 2013...

The primary purpose of the products being proposed is to provide guidance on the selection and use of M&S standards and recommended practices to support the Acquisition Lifecycle. The family of SISO products to be developed based on the product nomination is titled "A Standards Profile for the Use of Modeling and Simulation in Support of Acquisition Activities".

The proposed SISO products will be developed, published, and maintained as two volumes. The first volume, a balloted SISO Guidance Product, will identify a set of modeling and simulation standards and recommended practices as key tools for guiding the international acquisition community in the use of modeling and simulation in activities that take place across the typical acquisition lifecycle. The second volume, a SISO Reference Product, will provide the descriptions and metadata for each modeling and simulation standard and recommended practice identified in the SISO Guidance Product.
