# Today's Environment

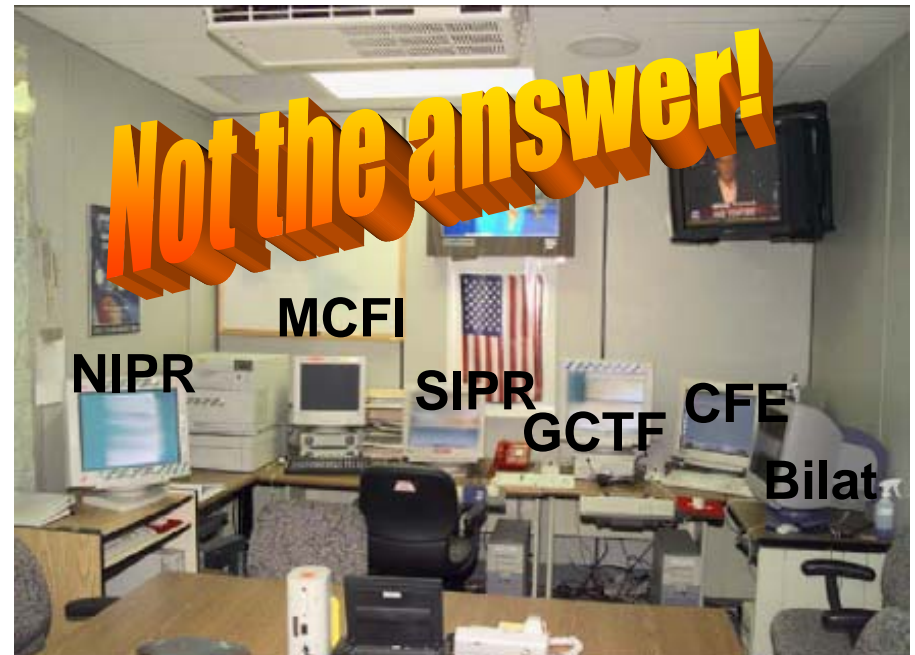

**We are still stove-piped – organize vertically, fight horizontally**

## The Joint Force Commander Today's Network Integrator

### Is Faced With:

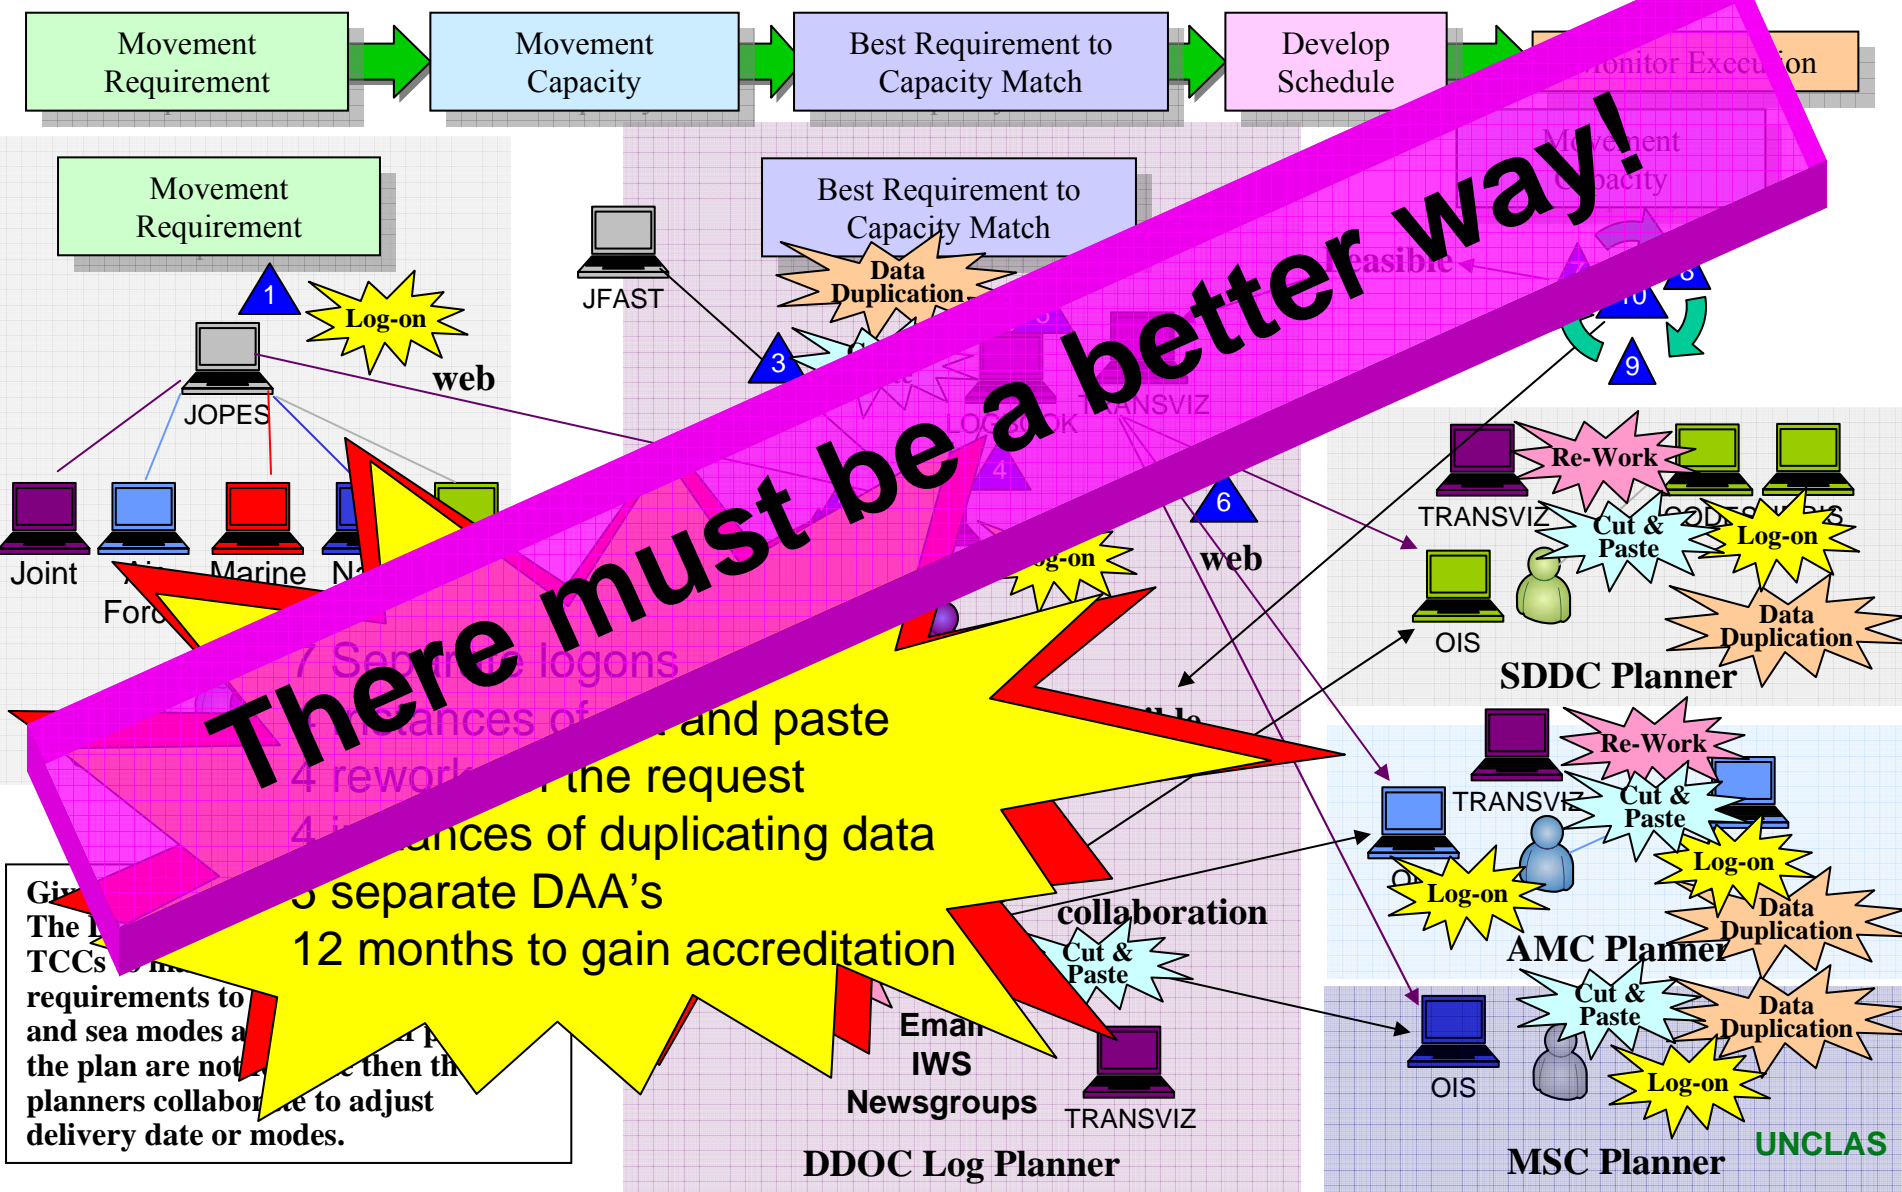

- Multiple infrastructures and associated hardware
- Inconsistent Security Postures
- Multiple NETOPS constructs; impeded global capability
- Information Sharing Requirements

UNCLASSIFIED

# Impact on the Warfighter

UNCLAS

# Why We Must Change

- The Department of Defense's core competency is fighting wars
- We fight as a Combined, Coalition and Interagency Force
- Cyberspace is now a warfighting domain
- We bring our networks to war

## However...

- Services credit their networks

Warfighting networks are not aligned or optimized for our core competency

**Anytime & Anywhere the Warfighter must have access to required data in order to gain the Information Advantage!**

***"The current approach to network provisioning supports business processes and puts the warfighter at the seams."***

UNCLASSIFIED

# GIG 2.0 Characteristics

**ALLIED AND COALITION LEADERS**

**SENIOR ADVISORS (DoD/Non DoD)**

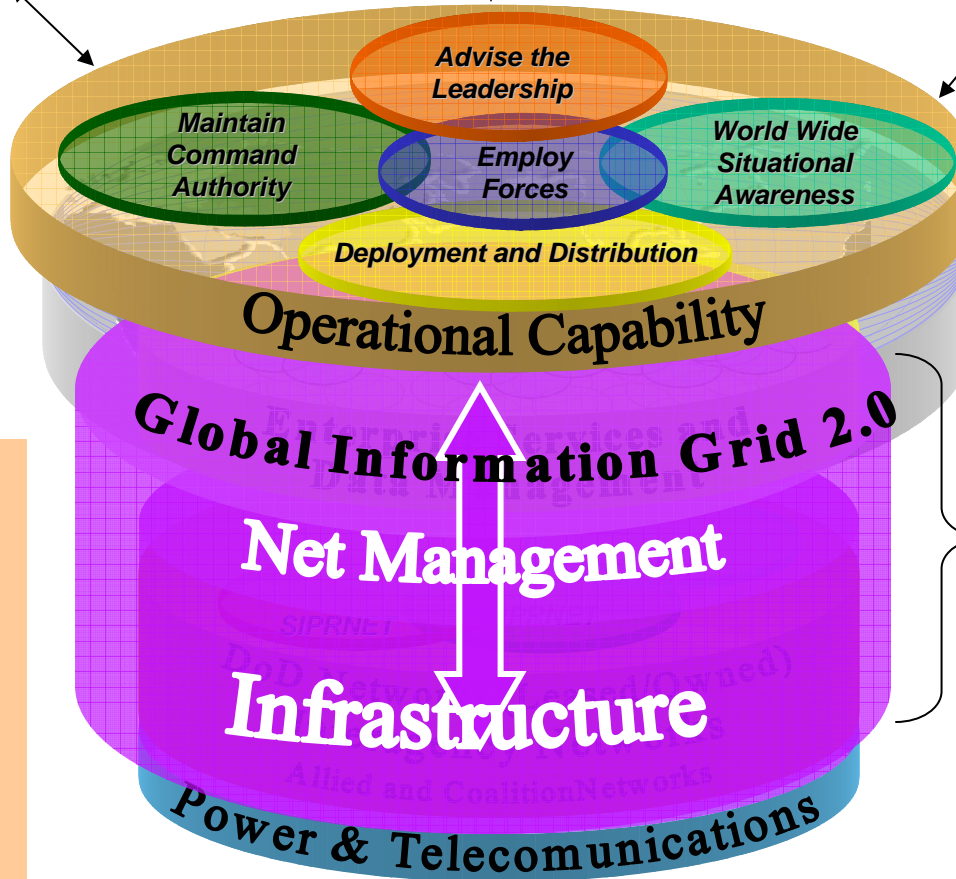

**PRESIDENT SECRETARY of DEFENSE**

**COMBATANT COMMANDS**

**JTF's Services Interagency**

1 Global Authentication, Access Control, and Directory Services

2 Information and Services from the edge

3 Joint Infrastructure

4 Common Policies and Standards

5 Unity of Command

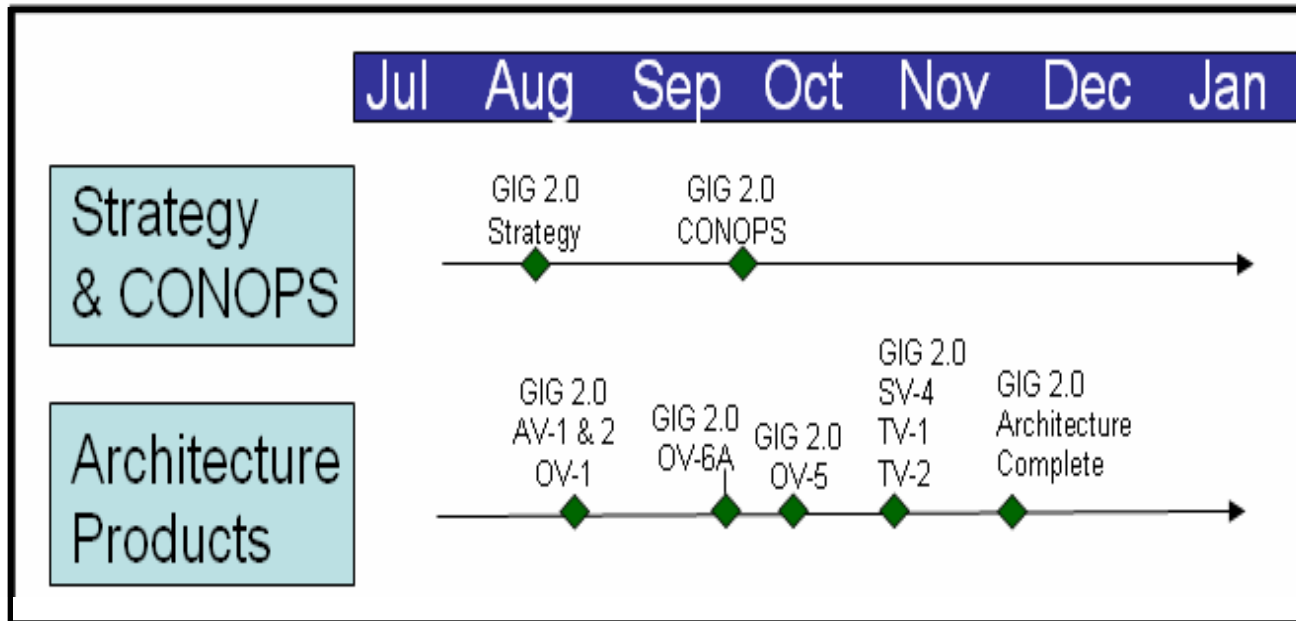

Net Management: adds GIG C2 functionality to enhance Mission Assurance

**GIG 2.0 provides Global access to required data in order to achieve the "Information Advantage"**

# What are We Doing about It?

- Drafting GIG 2.0 Strategy
- Building GIG 2.0 Architectures and CONOPS
- Establishing milestones
- Leveraging Joint Basing efforts
