Data management by H. Roussio

Robotics stocks in Korea, Japan and Europe are outperforming American stocks and the NASDAQ.

Why?

PPIP's, Public, Private Interest Partnerships focused on robotic growth where it will do the most good.

Korea is two years into an aggressive plan to invest \$1 billion in order to be #1 in the worldwide robotics industry by 2018 and they're spending \$100 million each year in that pursuit.

Japan has many PPIPs focused on enabling the elderly to remain independent as long as possible thereby reducing healthcare cost and providing a better life for its citizens with robotics.
