

NDIA ATC Board-Level Test Project

Scott Brown

The Boeing Company

September 12, 2010

Accomplishments

- Final report has been completed and submitted
- Project is complete

Findings

- Many Specification/Standards exist that have some application to Board Level Test (BLT)
 - The many potential specifications/standards result in confusion regarding application and adequacy for BLT
 - Few BLT Technologies are adequately addressed

Recommendations

- Development of a Handbook to clarify the application of Specifications and Standards to Board Level Test
 - Items to be considered during the Handbook development
 - Test objectives (manufacturing, maintenance, screening ...) can affect the assessment
 - Additional data requirements within a Standard may be required
 - Additional Standards may be required
 - Recommend the effort associated with the Handbook simply identify the requirement
