

# Action: GOCO Costs

- **Most significant quantifiable cost difference is security, driven by categorization of GOCO plants as Army installations**
  - **Suggested solution is to create “industrial facility” category in regulations and develop requirements comparable to commercial facilities, tailored to operations at each GOCO**
  - **Potential annual savings are at least \$5M across GOCO’s**
- **More difficult to quantify and solve are DOD safety requirements and Army audit requirements**
  - **Suggest continued review of audits by contracting office to reduce duplication and continuation of lean/six sigma project to improve safety site plan process**
- **More aggressive cost reductions could come by moving to privatization or lease models with more latitude to dispose of property to shrink footprint of facilities**
